RE: Port Washington Marina

Dear Rick:

As we discussed yesterday, I am forwarding copies of the soil analysis that were performed on the native beach soils at the Port Washington Marina in 1981. These were submitted with the original permit application for the construction of the marina, to confirm that the material to be dredged was not contaminated.

The proposed construction project at the marina calls for dredge spoils to be disposed at an upland site to be selected by the contractor. We do not yet know the location of the contractor's proposed disposal site, but will let you know as soon as it is established.

Once again we thank you for your cooperation in this matter. If you have questions or if I can be of any assistance, please feel free to call me at 622-8020.

Sincerely,

USEPA SF
